Comfortable In: Material UI, JWT Token

Familiar With: Vue Js, Redux, Typescript

Tools: VS Code, Figma, Netlify, Firebase, Heroku, Vercel, MongoDB

PROJECTS

Used Mobile Shop - Resale Used Product Website

People can buy used mobile phone from this website. Here buyer, seller, and admin are different roles of users. Here the seller can add his products, check his added products, and he can check his buyers of his products. Seller can delete products, advertise his products also. All these options are available only when he is logged in as a seller. Buyer can order products; can add products in his wish list and also he can report to the admin about a product. He can buy products with the card payment system of Stripe. Admin can see all buyers, sellers and reported products. He can delete reported products and can delete sellers or buyers also. Firebase authentication and JWT token used for checking valid users and their products.

Using Tools and Libraries in Client Side: React Js, Tailwind CSS, Daisy UI, Firebase, Stripe

Using Tools and Libraries in Server Side: Express Js, MongoDB, JWT Token

Live Site: [Mobile-Shop](#)

Server Code: [Server](#)

E-School – Online Learning Course Selling Website

In this website I want to build up an online course selling website named E-School. Where user can get their course using premium access. There are some categories of the courses and there are some courses related to those categories. Blog pages are answering some important questions

and faq also ensuring user to the course by answering valuable questions. In this website I have used firebase authentication system. User cannot get premium access to checkout page without login. So, I used a private route to handle this situation.

Using Tools and Libraries in Client Side: React Js, Tailwind CSS, Daisy UI, Firebase, CSS3

Using Tools and Libraries in Server Side: Express Js

Live site: [E-School](#)

Dental Care - Services Review Website

This project all about the dentist services review related. Where people can add their review to the service and delete and update also. He can also add service and watch his reviews. All these can be possible when he/she is logged in this site. There are menu in navbars home, blog, services, login and register. When user logged in then my reviews and add a service and log out menu added also. In this website I have used firebase authentication system. The extra two section in the home page is contact section and about the dentist section.

Using Tools and Libraries in Client Side: React Js, Bootstrap 5, Firebase

Using Tools and Libraries in Server Side: Express Js, MongoDB
